Astronomy Communication Seminars

Monthly half-hour seminars about contemporary issues in astronomy communication

Wednesday, 9 December 2009 - 14:00-14:30

ESO Auditorium

GalileoMobile: an astronomy itinerant project

Silvia Bonoli and Nuno Gomes on behalf of the Galileo Mobile Team

Abstract: GalileoMobile has just completed its first exciting journey across South America. GalileoMobile is an itinerant science education project bringing astronomy to young people, to foster a will of learning through the exciting wonders of our Universe, while supplying local teachers with educational resources to sustain their activities. GalileoMobile also will extend its impact to a worldwide audience through the production of a documentary movie, conveying a message of interaction beyond borders and thus of “unity under the same sky”. During this presentation, members of the GalileoMobile team will share their firsthand experience as well as the first results and achievements of this unique project.
